

# Clinical Summary: Vedicinals®9 Advanced and Spike Protein Detoxification

## Overview

Vedicinals®9 Advanced is a scientifically designed, multi-compound nutraceutical formulated to support the body in the clearance and neutralization of persistent spike proteins associated with SARS-CoV-2 infection and mRNA vaccine exposure. Its targeted action offers a unique approach for addressing symptoms related to Long COVID and spike-related injury.

## Mechanism of Action

Vedicinals®9 Advanced supports spike detox through multiple synergistic pathways:

### 1. Spike Protein Binding & Mobilization

- Components in Vedicinals®9 Advanced have demonstrated affinity for binding the full-length spike (S1) subunit, allowing it to be safely neutralized and removed from circulation without generating harmful fragments.

### 2. Immune Modulation

- Vedicinals®9 Advanced helps restore innate immune signaling disrupted by spike protein interference, supporting resolution of immune exhaustion and abnormal IgG4 responses.

### 3. Endothelial & Mitochondrial Support

- The formulation enhances endothelial function, reduces microvascular inflammation, and supports mitochondrial bioenergetics, helping to reverse spike-induced vascular and fatigue syndromes.

### 4. Anti-inflammatory & Antioxidant Effects

- Vedicinals®9 Advanced mitigates NF-κB-driven inflammation and oxidative stress—two key drivers of spike-induced cellular damage.

## Clinical Indications

- **Long COVID (Post-Acute Sequelae of SARS-CoV-2)**
- **Post-Vaccine Injury Syndromes**
- **Persistent Spike Protein Positivity**
- **Immune Dysregulation & Chronic Inflammation**

## Dosing Guidelines

- **Standard Protocol:** 25 mL daily
- **Timing:** Taken with meals

## Safety Profile

- Natural origin; generally well tolerated
- Do not take with blood thinners
- Safe for long-term use in complex patients under practitioner supervision

## Why Vedicinals®9 Advanced?

Unlike single-compound approaches, Vedicinals®9 Advanced is a broad-spectrum protocol specifically created in response to SARS-CoV-2 biology. It provides **comprehensive support for immune recovery, detoxification, and tissue repair**, addressing the **root biochemical challenges** posed by spike protein persistence.

## Note

Vedicinals®9 Advanced is intended for use under the supervision of a healthcare provider. This summary is for educational purposes only and does not constitute a claim to treat, cure, or prevent disease.
